The present invention provides human kinase polypeptides and the encoding polynucleotides. The invention is useful in the development of human therapeutic and diagnostic compositions, to identify therapeutic proteins and serve as targets for the development of human therapeutic agents that medulate kinase activity in cells and tissues, to elicit an immune response and for diagnosing and treating disorders characterised by the absence of inappropriate and unwanted expression of the protein. The jolypeptide is also useful in protein therapy. The present sequence is the human kinase protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

TK is also referred to as ATP-dTMP phosphotransferase. TK sequences are useful for identifying test compounds, that may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. Vectors comprising TK polynucleotides are useful in the preparation of a medicament for modulating the activity of TK in a disease, particularly cancer. The invention is also useful in gene therapy. The present sequence is human thymidylate kinase protein. TK gene is located on
                                                                                                                                                                                                                                                                                                                                                                                                             thymidylate kinase; BC 2.7.4.9; ATP:dTMP phosphotransferase; TK; cancer; gene therapy; chromosome 2p25.2.

The present sequence represents a human kinase and phosphatase (KPP)

protein KPP sequences have cardiovascular, antiatreriosclerotic,

protein kPP sequences have cardiovascular, antiathyroid,

antiallergic, antiasthmatic, immunosuppressive, antithyroid,

dermatological, antidabetic, nephrotropic, antigout, gastrointestinal,

cantinheumatic, antiparkinsonian, nootropic, antigout, gastrointestinal,

cantiheumatic, antiparkinsonian, nootropic, antigout, peptchalmological,

antiparciatic, heemostatic, rytostatic, antilipaemic, antiparasitic,

cus, antiparciatic, heemostatic, rytostatic, antilipaemic, antiparasitic,

cus, antiparciatic, heemostatic, rytostatic, antilipaemic, antiparasitic,

cus, antiparciatic, heemostatic, rytostatic, antilipaemic, antipares and

antichlminthic, antibacterial, virucide, protozoacide and fungicide

cutivities, and can be used for diagnosing, treating or preventing disorders

conclusions and person expression of KPP, such as cardiovascular

associated with aberrant expression of KPP, such as cardiovascular

ciseases (e.g. atherosolerosis, hypertension, vasculitis, cronvic

diseases (e.g. atherosolerosis, proteins), contact dermatitis, Crohn's

ciseases (e.g. atherosolerosis, proteins), or vasculitis, contact

disease, diabetes melliture), immune system disorders (e.g. ADS,

allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's

disease, diabetes melliture), immune system disorders (e.g. Alzheimer's

contective tristis, neurological disorders (e.g. Alzheimer's

costeoporosis, pancreatitis, neurological disorders (e.g. Alzheimer's

costeoporosis, parkence, ruseue disease, dementia or

cepilepsy), disorders affecting growth and development (e.g. cirrhosis,

contective anticological and disorders (e.g.

compounds on the expression of multiple contective, or viral, bacterial,

contective and and development of the expression of molect acids and kinases and

polymucleotides are also useful in assessing the effect of expendence or polymucleotides encoding KPP are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DQCPKQIQKGKEQVVAIEGLDATGKTTVTQSVADSLKAVLLKSPPSCIGQWRKIFDDEPT 300

The DNA and protein sequences of the invention are useful for the diagnosis, treatment and prevention of breast cancer. The present amino acid sequence represents a human breast-specific 09 09 useful for 1 MAFARRILRGPLSGPLLGRRGVCAGAMAPPRRFVLELPDCTLAHFALGADAPGDADAPDP 61 RLAALLGPPERSYSLCVPVTPDAGCGARVRAARLHQRLLHQLRRGPFQRCQLLRLLCYCP IIRRAFYSLGNYIVASEIAKESAKSPVIVDRYWHSTATYAIATEVSGGLQHLPPAHHPVY 301 IIRRAFYSLGNYIVASEIAKESAKSPVIVDRYWHSTATYAIATEVSGGLQHLPPAHHPVY 1 MAFARRIIRGPISGPLIGRRGVCAGAMAPPCRFVLELPDCTLAHFALGADAPGDADAPDP Gaps New breast specific nucleic acid molecules and polypeptides usef diagnosing, preventing or treating breast cancer, for producing transgenic animals or cells, or for research purposes. .; Length 449; Indels Σ Rodriquez 1; DB 8; Score 2350; DB 8, Pred. ```
which Nova polypepide. The Nova polypepide is particularly user in the Nova treating, preventing or alleviating pathology associated with Nova polypeptide in a mammal, e.g. a human. The Nova mucleic acid and polypeptide are especially useful for treating or preventing e.g. disbetes, obesity, cancers (e.g. lymphoma, uterus cancer or prostate cancer), dyslipidemias, anorexia, wasting disorders, Alzheimer's disease, darkinson's disorder, cachexia, cardiomyopathy, AIDS, astima, Crohn's graft-versus-host disease or Albright hereditary osteodystrophy. The DNA encoding the protein is useful in gene therapy for treating the above conditions. These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to new isolated NOVX polypeptides, the genes encoding them or sequences having at least 95% identity to the amino acid or nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, particularly in the manufacture of a medicament for treating a syndrome associated with a human disease, which includes a pathology associated with NOVX polypeptide. The NOVX polypeptide is particularly useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                Zhong
                                                                                                                                                                                                                                                                                                                                                                 BD;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      applications. This sequence represents one of the NOVX proteins of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ಥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New NOVX polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing a syndrome associated with human disease e.g. diabetes, obesity, cancer, Alzheimer's disease, hypertension or hemophilia.
                                                                                                                                                                                                                                                                                                                                                                 Zerhusen

The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 954 identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polypurelectide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, allaheimer's disease, AlDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, parxinson's disease, asthma, or fertility disorders. The mucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The example of the polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    87 ARVRAARLHQRLLHQLRRGPFQRCQLLRLLCYCPGGQAGGAQQGFLLRDPLDDPDTRQAL 146

TK is also referred to as ATP:4TMP phosphotransferase. TK sequences are useful for identifying test compounds, that may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. Vectors comprising TK polynucleotides are useful in the preparation of a medicament for modulating the activity of TK in a disease, particularly cancer. The invention is also useful in gene therapy. The present sequence is mouse thymidylate kinase protein. This sequence is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       thymidylate kinase; EC 2.7.4.9; ATP:dTMP phosphotransferase; TK;

contermining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the capression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthema or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13, or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (1) for testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent to treat bronchial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polynucleotide that suppresses the compound; a protein encoded by a marker gene; and (7) a DNA chip for testing for probe has been immobilised to assay a marker gene. (1) has respiratory expression of the gene through an RNA ieffect or an antibachmatic activities, and can be used in gene therapy. The method is useful for testing for researching for the probe has been immobilised to severe there is no be used in gene therapy. The method is useful for testing for the problem or a chronic obstructive pulmonary disease, on which a problem is as the control or severe specification or a subject or an antibody recognising the control of the gene through an end antibuted to a portion of the gene through an end and be used in gene therapy. The method is useful for testing for the problem is a proportion or the problem or an antibuted or an antibuted or an antibute of the problem or an antibuted or as a portion or and antisathmatic acti and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention. chronic obstructive pulmonary disease. The method comprises 8X3999999999999999999999999999999

RESULT 11

The invention relates to new isolated NOVX polypeptides, the genes encoding them or sequences having at least 95% identity to the amino acid or nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, particularly in the manufacture of a medicament for treating a syndrome associated with a human disease, which includes a pathology associated Σ antidiabetic; cytostatic; immunomodulator; anorectic; antilipemic; nortropic; neuroprotective; immunostimulant; antiparkinsonian; anti-HIV; antiasthmatic; antiinflammatory; hypyotonic; antiarteriosclerotic; hemostatic; osteopathic; gene therapy, NOVX; diabetes; obesity; cancer; lymphoma; uterus cancer; prostate cancer; dyslipidemia; anorexia; cardiomyopathy; Albs; asthma; Grobn; disease; parkinson's disorder; cachexia; cardiomyopathy; Albs; asthma; Crohn; disease; multiple sclerosis; hypertension; atherosclerosis; hemophilia; graft-versus-host disease; Miller CE, Kekuda R, Malyankar UM, Li L, rena can, cristian BD; Gorman L, Guo X, Fernandes ER, Smithson G, Stone DJ, Zerhusen BD; Patturajan M, Anderson DW, Mezes PS, Peyman JA, Macdougall JR; New NOVX polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing a syndrome associated with a human disease e.g. diabetes, obesity, cancer, Alzheimer's disease, Claim 1; SEQ ID NO 80; 748pp; English. polypeptide in a mammal, e.g. a human. The NOVX nucleic acid and polypeptide are especially useful for treating or preventing each addition and polypeptide are especially useful for treating or preventing e.g. a human. The NOVX nucleic acid and diabetes, obseity, cancers (e.g. lymphoma, uterus cancer or prostate cancer), dyslipidemias, anorexia, wasting disorders, Alzheimer's disease, Parkinson's disorder, cachexia, cardiomyopathy, AlbS, asthma, Crohn's disease, multiple sclerosis, phyertension, atherosclerosis, hemophilia, graft-versus-host disease or Albright hereditary osteodystrophy. The DNA encoding the protein is useful in gene therapy for treating the above conditions. These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic applications. This sequence represents one of the NOVX proteins of the

The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 95% identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polynucleotide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, Alzheimer's disease, Parkinson's disease, asthma, or fertility disorders. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. This sequence represents an example of the polypeptide of the invention.

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular cyganisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information or ceedived from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as paramaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a current in a mammal. In addition, they may be useful for measuring or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 317

The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 95% identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polymedie or more conservative substitutions in these. The useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, allaheimer's disease, AlDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, parkinson's disease, asthma, or fertility disorders. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. This sequence represents an example of the polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            256 AIEGLDAT-GKTTVTQSVADSLKAVLLKSPPSCIGGWRKIFDDEPTIIRRAFYSLGNYIV 314
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          315 ASBIAKESAKSPVIVDRYWHSTATYAIATEVSGGLQHLPPAHHPVYQWPEDLLKPDLILL 374

The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 954 identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polypucleotide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, alzheimer's disease, halb, multiple sclerosis, graft-versus-host disease, halb, multiple sclerosis, graft-versus-host disease, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. This sequence represents an example of the polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            63 ASBIAKESAKSPVIVDRYWHSTATYAIATEVSGGLQHLPPAHHPVYQWPEDLLKPDLILL 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  256 AIEGLDAT-GKTTVTQSVADSLKAVLLKSPPSCIGQWRKIFDDEPTIIRRAFYSLGNYIV 314

```

g

3124 bp mRNA linear HTC 20-SEP-2002 Mus musculus, Similar to thymidylate kinase family LPS-inducible member, clone IMAGE:3982036, mRNA.

DEFINITION RESULT 2 BC027329

ACCESSION

HTC 27-MAR-2003

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies,

/note="Vector: pExpress!; Site_1: Smal; Site_2: Not!; The library was constructed by reverse transcription of 1 ug mRNA using the oligo dT primer GCGCCCC(T) 20 and an RNaseH + MMLV reverse transcriptase. Second strand synthesis was carriaed out by standard methods. The cDNA was size selected by agarcse gel for > 1.2 kb, digested with Not I and directionally cloned into the vector Express-1 at the Smal/Not! sites. DNA from the primary library was used for in vitro transcription from the T7 promoter to produce biotinylated RNA transcripts. These biotinylated transcripts, and wrimer regions were

3, adaptor sequence: 5.-CACGGCCATTATGGCC-3' and adaptor sequence: 5.-ATTCTAGAGGCGGGGGCCGACATG-dT(30)BN-3' (where B = A, C, or G, or T). Average insert size 1.65 kb (range 0.9-4.0 kb). 14/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo, CA)."

/Lissue type="muccopidermoid carcinoma"
/lab_host="DH10B (T1 phage-resistant)"
/clone lib="NH1 MGC 59"
/clone lib="NH1 MGC 59"
/rote="Organ: lung; Vector: pDNR-LIB (Clontech); Site_1:
Sfil (ggccatcatggcc); Site_2: Sfil (ggccattatggcc);
Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CAGGCCATTATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCCGAGCGGACATG-dT(30)BN-3'
(Where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.65 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA).
